-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim 1 is pending in this application.

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 9/3/04 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Chu et al (US 4,859,776).

Instant claim is directed to a process of producing an amide comprising a thio acid and an organic azide in the presence of a solvent, so that an amide is produced.

Chu et al is teaching process of producing an amide comprising a thio acid and an organic azide in the presence of a solvent, to produce an amide, see columns 9- 10, and Table II. With respect to the solvent, thioacetic acid can be used as solvent also.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1621

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chu et al in view of Fazio et al (Tetrahedron Lett., 2003).

Instant claim is directed to a process of producing an amide comprising a thio acid and an organic azide in the presence of a solvent, so that an amide is produced.

Chu et al is teaching a process of producing an amide comprising a thio acid and an organic azide, see column 10, Table II. The difference between the reference and herein claimed process is that the reference does not use the word solvent, although it is well known that thioacetic acid can be used as solvent also.

Fazio et al is cited to show that in the process of making an amide starting from an azido and thioacetic acid, use of solvent is old in the art, see page 9084, Table 1.

It would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made to modify the process of Chu et al, by including a solvent other than thioacetic acid, as taught by Fazio et al, because the latter reference is expressly teaching that the use of solvent is old in the process of making an amide from starting from an azido and thioacetic acid.
